1.0 TARIFF FORMAT

1.1 Sheet Nuxnbering. Sheet numbers appear in the upper right corner of the page. Sheets are numbered sequentially. However, new sheets are occasionally added to the tariff. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14.1

1.2 Sheet Revision Numbers. Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current sheet version on file with the ACC. For example, the 4th revised Sheet 14 cancels the 3rd revised Sheet 14. Because of various suspension periods, deferrals, etc. the ACC follows in their tariff approval process, the most current sheet number on file with the ACC is not always the tariff page in effect. Consult the Check Sheet for the sheet currently in effect.

1.3 Paragraph Numbering Sequence. There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level:

- 2.
- 2.1.
- 2.1.1.
- 2.1.1.A.
- 2.1.1.A.1.
- 2.1.1.A.1.(a).
- 2.1.1.A.1.(a).I.
- 2.1.1.A.1.(a).I.(i).
- 2.1.1.A.1.(a).I.(i).(1).

1.4 Check Sheets. When a tariff filing is made with the ACC, an updated check sheet accompanies the tariff filing. The check sheet lists the sheets contained in the tariff, with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on this page

4.0 Rate Schedules.

4.1 Determination of Mileage.

4.1.1 With the exception of 800 Service and Business Flat Rate Service which are measured and billed in six second increments, calls are measured and rounded to the higher full minute from the call's originating Rate Center to the Rate Center of the destination of the call.

4.1.2 The distance between the originating Rate Center of the Customer's call and that of the destination point is calculated by using the vertical ("V") and horizontal ("H") coordinates found in AT&T FCC Tariff No. 10, in the following manner:

Step 1 - Obtain the "v" and "H" coordinates for the Customer's originating point and the destination point of the call.

Step 2 - Obtain the difference between the "V" coordinates of each of the Rate Centers. Obtain the difference between the "H" coordinates.

Step 3 - Square the difference obtained in Step 2.

Step 4 - Add the squares of the "V" difference and "H" difference obtained in Step 3.

Step 5 - Divide the sum of the squares obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.

Step 6 - Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the Rate Centers.

FORMULA:

$$v = \sqrt{\frac{(V_1 - V_2)^2 + (H_1 - H_2)^2}{10}}$$
